These peptides were used to raise CC monoclonal anti-STRAP-1 antibodies. STRAP-1 is the prototype CC member of the STRAP family of proteins (AAYSB194-YSB197) which show exhibit a high degree of structural conservation, but which show CC on significant structural homology to known human proteins. The STRAP-1 CC gene has been localised to chromosome 7922. STRAP-1 is thought to be a CC type IIIa membrane protein and is expressed predominantly in prostate CC calls in normal human tissues. Structurally, STRAP-1 is a 339 amino CC increacellular N- and C-termini, suggesting that it folds in a CT georgettine manner into three extracellular and two intracellular loops. STRAP-1 mRNA and protein expression is maintained at high levels and CC throughout all stages of prostate cancer. STRAP-1 mRNA and/or protein is CC also overexpressed in certain other cancer, including bladder, colon, CC pancreatic and ovarian cancer. The function of the STRAP proteins is not CC domains, a feature which is shared by certain on channels or CC domains, a feature which is shared by certain on channels or CC gap-junction proteins (from immunohistochemical staining). STRAP-1 and CC STRAP-2 are cell-surface tumour antigens. Immunisation with a STRAP CC specific binding agents, to produce anticancer vaccines and to generate CC specific antibodies. The antibodies may be used to identify specific antibodies. The antibodies may be used to identify and propositic respectic respectability to cancer), as therapeutic cCC inhibitors or to target therapeutic agents to their site of action. STRAP CC inhibitors or to target therapeutic agents to their site of action. STRAP CC inhibitors on the cell surface, they are easily targetted by certeins are exposed on the cell surface, they are expressed mainly CC systemically administered agents, and because they are expressed mainly CC sitemically defected on other tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           문

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to human six transmembrane epithelial CC antigen of the prostate (STEAP) protein. STEAP is a member of cell surface serpentine transmembrane antigens. STEAP gene is used in gene therapy. Inhibiting the development or progression of a cancer (eg. prostate, colon, bladder, lung, ovarian and pancreatic) expressing STEAP or inhibiting growth or killing cells expressing STEAP in a patient. Treating comprises administering a vaccine composition to the patient. Treating a patient with a cancer that expresses STEAP, or inhibiting growth or killing cells expressing STEAP, comprises administering to the patient a vector encoding single chain monoclonal antibody that comprises the vector encoding single chain monoclonal antibody that comprises the cancer chain monoclonal antibody coding sequence to the cancer cells and the encoded single chain monoclonal antibody is expressed intracellularly. The present sequence is extracellular loop of STEAP-1 suitable for cloning into pfc, which is used in the invention. STEAP-1 cancer is located on chromosome 7p22.3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC of the secreted proteins and amino acid sequences with which these corrected proteins and amino acid sequences with which these conjuncted tides and the activities of the proteins and conjuncted tides and the activities of the proteins and conjuncted tides, immunosuppressive; antiathritic; antirheumatic; cardiant; vasotropic; cerebroprotective; conotropic; neuroprotective; antiathritic; antirheumatic; correspondent and polymucleotide copthalmalogical; and vulnerary activity. The protein and polymucleotide sequences, their agonists and antagonists may be useful for treating, correventing and diagnosing diseases and disorders such as autoimmune conjuncted arthritis, hyperproliferative disorders c.g. requirest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, conjuncted arthritis, hyperproliferative disorders c.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, c.g. cardiac arrest, cerebrovascular disorders e.g. Alzheimer's disease, c.g. Alzheimer's disease, c.g. Alzheimer's disease, c.g. Alzheimer's disease, c.g. angiogenesis, nervous system disorders e.g. Alzheimer's disease, c.g. angiogenesis, nervous system disorders e.g. Alzheimer's disease, c.g. angiogenesis, nervous system disorders e.g. Alzheimer's disease, c.g. angiogenesis, nervous system disorders and so be used to aid wound c.g. corneal infection. The polypeptides can also be used to aid wound c.g. corneal infection. The polypeptides can also be used to aid wound c.g. corneal infection organs before transplantation, for supporting cell c.g. polypeptides can also be used as a food additive or preservative to c.g. corneal infection and characterisation of the DNA and protein are used cinthe identification and characterisation of the DNA and protein c.g. sequences of the invention.
                                                                                                                                                                                                                                                                                                                                      밁

of the secreted proteins and amino acid sequences with which these fragments share homology. Examples of the activities of the proteins and polynucleotides and the activities of their agonists and antagonists include, immunosuppressive; antiarthritic; antirheumatic; antiproliferative; cyrostatic; cardiant; vasotropic; cerebroprotective; antibacterial; virucide; fungicide; nootropic; neuroprotective; antibacterial; virucide; fungicide; opthalmalogical; and vulnerary activity. The protein and polynucleotide sequences, their agonists and antagonists may be useful for treating, preventing and dispossing diseases and disorders such as autoimmune diseases e.g. rheumatoid arrhitie, hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, and command arrest e.g. cerebral ischaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      vulnerary; autoimmune disease; hyperproliferative disorder; cancer; cardiovascular disorder; cerebrovascular disorder; infection; nervous system disorder; ocular disorder; chemotaxis; food additive
                                                                                                                                                                              angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. Included in the invention are oligonucleotides AAF63780 - AAF63788 and peptide AAB75239 which are used in the identification and characterisation of the DNA and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and Parkinson's diseases and cancers -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to polynucleotide sequences AAF63789 - AAF63836 which encode human secreted proteins AAB75260 - AAB75287. Included in the invention are protein sequences AAB75288 - AAB75341 which are fragments
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-JUN-2000; 2000WO-US15135

        This sequence represents a novel human protein, STRAP-1 (serpentine transmembrane antigen of the prostate). STRAP-1 is the prototype member of the STRAP femily of proteins (AAY58194-Y88197) which exhibit a high degree of structural conservation, but which show
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Serpentine transmembrane antigen of the prostate; transmembrane domain; type IIIa membrane protein;

STRAP-1 is thought to be type IIIa membrane protein and is expressed predominantly in prostate cells in normal human tissues. Structurally, STRAP-1 is a 339 amino acid protein characterised by six transmembrane domains and intracellular N- and C-termini, suggesting that it folds in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            polynucleotides, polypeptides, fusion proteins of the polypeptides, antibodies raised against the polypeptides (or antigenic epitopes derived from them) and antigen-presenting cells expressing the polypeptides. The antibodies are useful for detecting the presence of cancer, especially prostate cancer. The polypeptides, polynucleotides and the antigen-presenting cells are useful for stimulating and/or expanding T cells specific for a tumour protein, and for inhibiting the development of cancer especially prostate cancer. Compositions comprising the polynucleotide and/or polypeptide are useful for stimulating an immune response, and for treating cancer. The present sequence is a prostate specific polypeptide of the invention.

Kalos MD,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polyput celectides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haemacomodulatory activity and activity, tissue growth factor activity, hamunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes polynucleotide sequences (I) which encode prostate-specific proteins (II). (II) and (II) have cycostatic activity, and can be used in vaccine production and gene therapy. (I), (II), antibodies to (II), fusion proteins comprising (II), and isolated T cells prepared using (I) or (II) are used treat cancer in a patient. (I) and the antibodies are also used in the detection of cancer in a patient. The cancer that is diagnosed or treated is particularly prostate cancer. (I) and (II) can be used in vaccines. The antibodies or (I) can be used for monitoring the progression of cancer in a patient. (I) and (II) can also be used to improve diagnostic and therapeutic methods for prostate cancer. They can indicate the level of metastasis as well as the prostate volume. AAH93357 to AAH93944 and AAM01115 to AAM01318 represent polynucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                            Detecting a prostate cancer-associated transcript in a cell in a patient, useful for diagnosing prostate cancer (PC) or screening modulators of PC, by determining if prostate cancer-associated gears expressed in a prostate tissue
The present invention relates to methods of detecting a cancer-associated transcript in a cell from a patient. I
                                                                                                                                                                                                                                                                                                                                                                                          Gigh
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mammalia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Prostate cancer; prostate tumour tissue; human; mammal; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           15-AUG-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  comprises contacting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various corganisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for disgnosing and treating prostate cancer in mammals. The prostate cancer, as well as for identifying modulators of prostate cancer, as well as for identifying modulators of prostate cancer or apents that inhibit prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications.

C ABG61800-ABG61944 represent prostate cancer-associated proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides prostate-specific coding sequences their encoded proteins. These can be used in the diagnosis and tre of cancers, particularly prostate cancer. The present sequence is protein described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New prostate-specific polynucleotides for diagnosing and treating diseases, in particular prostate cancer, and as markers for the progression of cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (HARL/)

The present sequence is human six transmembrane epithelial antigen of CC the prostate (STEAP)-1 protein of clone 10. STEAP is a member of cell CC surface serpentine transmembrane antigens. STEAP-1 gene is located on CC chromosome 7p2.3 and is used in gene therapy. Inhibiting the development CC or progression of a cancer (eg. prostate, colon, bladder, lung, ovarian CC and pancreatic) expressing STEAP or inhibiting growth or killing cells CC expressing STEAP in a patient, comprises administering a vaccine CC composition to the patient. Treating a patient with a cancer that CC expresses STEAP, or inhibiting growth or killing cells expressing STEAP, CC comprises administering to the patient a vector encoding single chain CC monoclonal antibody that comprises the variable domains of the heavy and CC light chains of the monoclonal antibody that specifically binds to STEAP, CC such that the vector delivers the single chain monoclonal antibody coding Sequence to the cancer cells and the encoded single chain monoclonal CC antibody is expressed intracellularly.

CC Note: The present sequence is also shown in sequence listing of the cancer cells and the single chain monoclonal end.

CC specification, but it lacks amino acid residues at its N-terminal end.

                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                           by expressing KIM encoding polynucleotides, to promote growth and/or by expressing KIM encoding polynucleotides. (c) promote growth and/or are upregulated in injured or regenerating (especially renal) tissues. KIM fusion proteins, conjugates, antibodies and vectors can also be used therapeutically, e.g. these or the KIM proteins may be included with an acceptable carrier in pharmaceutical compositions, useful for therapy/ prophylaxis of conditions associated with disfunction/disregulation of KIM genes or proteins, especially renal diseases or impairments of renal function in humans (e.g. acute renal failure, acute nephritis). The polynucleotides can be used to produce antisense sequences which, when internalised into cells, can disrupt expression of a cellular KIM gene, also useful in therapy (e.g. to detect and quantify renal injury/disease (indicative of increased risk, or presence of, an autoimmune response or impaired function), or abnormal responses to tissue injury (indicative of increased risk, or presence of, an autoimmune response or abnormal tissue) The proteins can also be used to locate KIM-producing cells (especially specific loci, c.g. tissue growth arising from/affecting renal tissue). The proteins can arising from/affecting renal tissue), by contacting cells with an imageable KIM-binding reagent and imaging reagent accumulation.
                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                              The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or

The p-HYDE gene is associated with the regression of tumour growth in vivo, the induction to susceptibility to apoptosis caused by UV or chemotherapy induced DNA damage and prevention of DNA repair with the upregulation of apoptosis as the result of UV damage and the failure to repair DNA. The present sequence may be used to

The present sequence is murine TSAP6, which was used in the method of the invention. (I) are useful for modulating tumour reversal and/or apoptosis for treating cancer or
